A.Title: Solution structure of omega-conotoxin MVIIC, a high affinity of P-type calcium A.Reference number: A58582; MUID:95248539; PMID:7731037

A.Contents: annotation; conformation by (1)H-NMR

C.Superfamily: omega-conotoxin

C.Keywords: acetylcholine release inhibition; amidated carboxyl end; calcium channel inh C.; Reperfamily: omega-conotoxin WVIIC #status experimental CMAT>

F.3-28/Product: omega-conotoxin WVIIC #status experimental

F.3-18.10-22.17-28/Disulfide bonds: #status experimental

F.3-18-/Modified site: amidated carboxyl end (Cys) (amide in mature form from following 91)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A;Note: sequence extracted from NCBI backbone (NCBIP:116002); structure confirmed by che

Micrarrottonenia 3 - fat.

Micrarrottonenia corvegicus (Norway rat)
C; Species: Rattus norvegicus (Norway rat)
C; Species: S8086; 152636
R; Amoureux, M.C.; Rethsaus, E.; Wurch, T.; Colpaert, F.C.; Pauwels, P.J.
Submitted to the EMBL Data Library, July 1995
A; Reference number: S8088
A; Statuus: presiminary
A; Modecule type: mRNA
A; Residues: 1-66 <AMO>
A; Cross-references: EMBL: X89603; NID:9908880; PIDN:CAA61762.1; PID:9908881

Sequence 16, Application US/07789913
Fatent No. 5559095
GENERAL INFORMATION:
APPLICANT: Miljanich, George P.
APPLICANT: Bowersox, Stephen S.
APPLICANT: Pox, James A.
APPLICANT: Valentino, Karen L.
APPLICANT: Valentino, Karen L.
APPLICANT: Vanashiro, Donald H.
TITLE OF INVENTION: Delayed Treatment Method of Reducing TITLE OF INVENTION: Ischemia-Related Neuronal Damage NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Law Offices of Peter Dehlinger
STREET: 350 Cambridge Avenue, Suite 300

The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronnochetension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
             invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate analgesia, in the treatment of schizophrenia, stimulant induced prychoses, hypertension, inflammation, and diseases which cause pronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Omega-conotoxin; venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischlemla; analgesia; Oplate analgesia; CVID; schlzophrenia; stimulant induced psychosis; hypertension; inflammation; bronchotension; neuropathic pain; voltage sensitive calcium channel.

Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/O type channels, and so block N-type calcium channels over P/O type channels, invention can be used in any disease or disorder where blockage of N-type calcium channels is requirined, e.g. in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate managesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                                                                                                                                          Omega-conotoxin; venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analgesia; opiate analgesia; CVID; schizophrenia; stimulant induced psychosis; hypertension; inflammation; bronchotension; neuropathic pain; voltage sensitive calcium channel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel peptides used for the treatment of disorders and diseases where blockage of the N-type calcium channels is required \,

AAY43718-36 represent derivatives of omega-conotoxin CVID.

Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for Nrtype calcium channels over P/O type channels, and so block N-type calcium channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels. In the reduction of neuronal damage following ischemia, production of an anglesia, or enhancement of opiate managesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó

cVID (see AAV43712). Omega-conotoxins are isolated from venoms of predatory marine shails, and have a selectivity for N-type calclum channels over P/O type channels, and so block N-type calclum channels. The omega-conotoxins of the invention can be used in any disease or the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Omega-conotoxin, venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analgesia; oplate analgesia; OVID; schizophrenia; stimulant induced psychosis; hypertension; inflammation; bronchotension; neuropathic pain; voltage sensitive calcium channel.
                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel peptides used for the treatment of disorders and diseases where blockage of the N-type calcium channels is required \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a modified version of omega-conotoxin
bronchotension; neuropathic pain; voltage sensitive calcium channel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Amino acid sequence of an omega-conotoxin derivative of CVID.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     98.1%; Score 155; DB 21; Length 27; 96.3%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of meuronal damage following ischamia, production of analgesia, or enhancement of opiate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type
                                    Omega-conotoxin; venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analgesia; oplate analgesia; schizophrenia; stimulant induced psychosis; hypertension; inflammation; bronchotension; neuropathic pain; voltage senaitive calcium channel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Omega-conotoxin; venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analgesia; opiate analgesia; schizophrenia; stimulant induced psychosis; hypertension; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents an omega-conotoxin. Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/O type channels, and so block N-type calcium channels. The omega-conotoxins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel peptides used for the treatment of disorders and diseases where blockage of the N-type calcium channels is required \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                       Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/O type channels, and so block N-type calcium channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with

                                                                                                                                             AAY43718-36 represent derivatives of omega-conotoxin CVID.

Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/Q type channels, and so block N-type calcium channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal danage following ischemia, production of analgesia, or enhancement of opiate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAY43718-36 represent derivatives of omega-conotoxin CVID.

Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/O type channels, and so block N-type calcium channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Omega-conotoxin; venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analgesia; opiate analgesia; CVID; schizophrenia; stimulant induced psychosis; hypertension; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and diseases where

They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/Q type channels, and so block N-type calcium channels. The omega-conotoxins of the
analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.

AAY43718-36 represent derivatives of omega-conotoxin CVID.

Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/Q type channels, and so block N-type calcium channels The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of oplate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                      Omega-conotoxin; venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analgesia; oplate analgesia; CVID; schizophrenia; stimulant induced psychosis; hypertension; £nflammation; bronchotension; neuropathic pain; voltage sensitive calcium channel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel peptides used for the treatment of disorders and diseases where blockage of the N-type calcium channels is required \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

AMY43718-36 represent derivatives of omega-conotoxin CVID.

Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/O type channels, and so block N-type calcium channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels. In the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Omega-conotoxin; venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analgesia; opiate analgesia; CVID; schizophrenia; stimulant induced psychosis; hypertension; inflammation; bronchotension; neuropathic pain; voltage sensitive calcium channel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Amino acid sequence of an omega-conotoxin derivative of CVID.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 27;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAY43718-36 represent derivatives of omega-conotoxin CVID. Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/Q type channels, and so block N-type calcium channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of oplate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
                                                                                                       Omega-conotoxin; venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischiemia; analgesia; oplate analgesia; OVID; schizophrenia; stimulant induced psychosis; hypertension; inflammation; bronchotension; neuropathic pain; voltage sensitive calcium channel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Omega-conotoxin; venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analyesia; oplate analgesia; VVID; schizophrenia; stimulant induced psychosis; hypertension; inflammation; bronchotension; neuropathic pain; voltage sensitive calcium channel.

and diseases where

```
AMY43718-36 represent derivatives of omega-conotoxin CVID. Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/O type channels, and so block N-type calcium channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels. In the reduction of neuronal damage calcium channels, in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate malgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
                                                                                                                                                                                                              Novel peptides used for the treatment of disorders and diseases where blockage of the N-type calcium channels is required \,

Patent No. 5587454

GENERAL INFORMATION:
APPLICANT: SINGH, TEJINDER
APPLICANT: GOHIL, KISHOR C
APPLICANT: GOHIL, KISHOR C
APPLICANT: MIJANICH, GEORGE P
TITLE OF INVENTION: METHODS OF PRODUCING ANALGESIA AND
TITLE OF INVENTION: ENHANCING OPIATE ANALGESIA
NUMBER OF SEQUENCES: 34
CORRESPONDENCE ADDRESS:
                APPLICANT: Yamashiro, Donald H.
TITLE OF INVENTION: Delayed Treatment Method of Reducing TITLE OF INVENTION: Ischemia-Related Neuronal Damage NUMBER OF SEQUENCES: 28 CORRESPONDENCE ADDRESS:
ADDRESSEE: Law Offices of Peter Dehlinger STREET: 350 Cambridge Avenue, Suite 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB 1; Length 25;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0; Indels
